Ventilation System

## PURGE VENTILATION SYSTEM

A purge system draws air from the atmosphere, introduces it into the range, filters the air, and then releases cleaned air back into the atmosphere. Purge systems use prefilters that are changed monthly and HEPA filters that are changed every 2,400 hours.

**Clean**  
Range air  
is  
cleaned

conditions.

## CLEAN AND EFFICIENT SHOOTING RANGE VENTILATION

### 1. SYSTEM CONTROL

Available digital and analog systems give you control over the ventilation system and provide remote access for service and maintenance.

### 4. RANGE EXHAUST FAN

The range exhaust fan (REF) filters contaminated air to keep the area around the range clean, exceeding OSHA, EPA, and NIOSH requirements.

## 2. LAMINAR DIFFUSION

Clean air is introduced into the range behind the shooting line. A radial diffuser ensures the air is evenly distributed.

## 3. AIR FLOW

Negative air pressure draws hazardous dust safely away from the shooter toward the bullet trap at a rate of 75 feet per minute, exceeding minimum NIOSH standards. It then enters an advanced filtration system for a final cleaning process.

## 5. MAKE UP AIR UNIT

The make up air unit (MAU) draws and filters air from the atmosphere and introduces it into the range. Units are available in either heating only or heating and evaporative cooling options.

# ADVANCED SYSTEM CONTROL

Action Target ventilation systems are equipped with a powerful system control that provides everything necessary to keep the system running at peak condition. The digital touch screen provides local and remote access to system status, filter status,

temperature control, system warnings, alarms, and more.

## RELIABLE FILTRATION

Action Target ventilation systems provide the best filtration on the market, keeping the inside and outside the shooting range clean and safe. When used properly, our HEPA filters provide 99.97% efficiency and exceed OSHA, EPA, and NIOSH requirements. Purge systems use a combination of a prefilter and HEPA filter.
